## Preface

This book is originally based on agriculture as a national economic foundation, but also a very special field, to study the issue of risk management and its existence. However, the concept of risk present in agriculture, especially in China, as a large agricultural country located in Asia, despite the natural disasters occurring very frequently, until the 1980s, agricultural risk management was few studied. After the new millennium, China's accession to WTO, the market-oriented reforms to carry out a comprehensively, increasingly strengthen risk awareness and agricultural production and management problems have been raised to the agenda. Therefore, this book attempts to collect over the past decade of our studies, to distribute from the concepts, methods and principles of agricultural production and business risk management to the readers.

Since China joined WTO in 2001, the concerns that people firstly afraid should be about the problem on “the agriculture, the rural and the farmers”. Moreover, “who will feed China?” in the 21st century, in order to solve those kinds of difficulties, study the agricultural production, business risk management and decision issues becomes one of the arduous and complicated subjects of China's economic development. The agriculture in China not only is a weak and basic industry, but also it is a typical risk industry. The agricultural risk can be roughly summed up as two big kinds, which are called the natural risk and the market risk. To the entire agricultural development, other environmental factors or the exogenous factors of agriculture, like political system, law, policy and social factor and so on, may also have profound influence to its development. Thus, the development of agriculture general directly impacted by the mutual actions of the natural risk and the market risk, and indirectly come from the agricultural ecological environment, social economic environment, political and laws environment, science, technological and international economic environment and any other unfavorable factor variations of them might cause to increase agricultural

production and business risk. So that, China is making efforts to promote the modernization of agriculture, in the face of natural processes and market economy uncertainties and risks, expanding the scale of agricultural production, and forming the modern market system. The degree of agricultural organizations, marketization and socialization to improve, following more and more capital factors come into agriculture, which will make the risk management become truly important. We must study agricultural production management and business risk decision problems in using complex system methods, in order to adapt to this new historical stage existed requirements of socio-economic development.

However, uncertainty is common occurrence in natural environment, and usually impacts on agricultural production more than other industries. We are in an era of information-based economy, we find that scientific concept of information covers the relationship between risk and uncertainty. Therefore, the market risk of caused from it and the related disposal process will more relies on the information and financial technical support. This book is based on above understanding and to use of information economics and information technology extensively, to explore agricultural risk management information integration framework through the systematic economic analysis. Such as, to describe the agricultural production and business risks management as a system process, to build up system thinking pattern, which we refer it as an “Open Complex Giant System”, and think that information come from the system or its information contents is essentially important. If information is defined in system science, then different signals will form the structural concept of information, and to reduce uncertainty will be a functional concept of information. In fact, the signal and the noise, the possibility and the uncertainty, as well as the orderly and the chaos are all paired relative concepts, while only information obtained can help us. So that, obtaining information signifies to reduce uncertainty, to increase probability, to lower the system entropy and to improve the system’s order. Using information as the economic subjects or agents

can more accurately grasp the operation of the systems to cope with or deal with the risks. In addition, agricultural management decision-making under conditions of risk and uncertainty, both at the micro or macro aspect the economics analysis need to make the equilibrium study, and to pursuit of system optimization, which constitutes the study of methodology system.

Though the domestic and international scholars have already had a large amount of researching results to the risk question, yet direct against agricultural production and business risk management theory and decision methods are lack of integrating research. According to China agricultural actual development, this book goes on a deep and comparatively comprehensive study about the agricultural risk management. Including the introduction and conclusion, the full text book added up to nine chapters. The main research contents can be summarized as the following several respects:

*1. Basic conceptions and theories of agricultural risk research*

Based on the concept of information, to contact uncertainty and risk, to study of risk identification and measurement, constructed the basic theoretical framework of this study. These contents included in the book of Chapter 1-4, which mainly discussed such as: (i) Based on agricultural risk existed actual background and according to modern economics theory and risk management measures to construct the theory frame of risk discerning and measurement. (ii) Regarding the concept of entropy as an important foundation of the risk analysis, research and set up the inner link among the risk, uncertainty and information, to prove the equivalent relation among information entropy, variance and expected utility. It puts forward the concepts of absolute information risk, relative information risk and information technical ability risk, etc. to observe the information risk. (iii) A technical route was provided including the procedure, methods and theories of the study, the purpose at to identify,

measure and manage the operational risk of agricultural production, as well as a basis to establish the macro agricultural risk management system.

### *II. Concrete methods in agricultural production and business risk management*

Due to agricultural risks can be divided into natural risks and market risks, therefore, their management measures have been classified as production risk management and business risk management. To reduce and prevent as risks aversion from internal of an agricultural production system, it studied the analysis of production risk and optimal. To disperse and transfer agricultural risks it introduced market risk management tools, such as insurance and future markets. Those included in Chapter 5-6, especially discussed concretely as: (i) Integrate with practice, probed into agricultural insurance and futures market tools to disperse, averse and take precautionary measures against agricultural production and business risks. (ii) Reducing risk decision methods as inner risk management tools, study with statistical analysis, such as, Quadratic programming, stochastic dominance, etc. to produce optimal strategies of agricultural production and business risk portfolio. (iii) As the markets of agricultural risk management, insurance and futures take play an important active role for certain scale of agricultural production. Here are just introduced some of preliminary analysis on the use of methodological and the market tools, basically mainly is about wheat insurance, setting agro insurance system, as well as wheat futures market analysis.

### *III. Exploration the macro-management system of agricultural risk*

Considering agricultural risk management as an open complex giant system, set up the concept of risk-based system, especially using entropy methods to study the agriculture risk hierarchical distribution model, risk converging model, risk transmitting model and risk scattering model. Which included in Chapter 7-8, some of the main contents are as following: (i) According to risk formed pattern of described by open complex giant system theory, then summarize four possible major risk systematic rules, such as, systematic risk

hierarchies distribution, risk converging, risk transmitting and risk scattering, proposed to establish a stereoscopic and multidimensional risk management system. (ii) Based on the giant system should be open, macroscopic, complex and uncertain, defined a concept of global risks system, thus, the risk management system of agricultural production and management should be as one of its subsystems. Taking for animal disease risk desperation and spread as an example, we designed a management optimization model on. (iii) The book in Chapter 8 finally discussed to use Internet and information technology support to establish a comprehensive information management system, which will be formed Internet +agriculture (agricultural standard production, market, insurance, finance and risk management in integration). It has been a prospective development direction of modern agriculture towards intelligent era. Currently, agricultural modernization, industrialization, urbanization and informatization, i.e. “four modernization synchronization promoting” has become the strategic initiatives of enforce China’s economic development.

Based on its contents, this book is intended and useful for academic community, audience and for ordinary citizens as much as the study is linked to the Chinese experience and seems to reflect the viewpoints of domestic researchers. The book also would be useful for practical experts as much as it would fill the gaps of their theoretical background. Since the book consists of a good case study of risk management in practice, it will be of interest for researchers in the fields of risk management, insurance, agriculture, agricultural economic management.

## Acknowledgments

First of all, we have to be very thankful to this era and national economic reforming and open up. Without such a social and economic development, it is impossible to provide such research opportunities and internal demand. We would also like to express my gratitude and thanks to all our teachers, wherever they come from China or abroad. At Tianjin University, Professor Gu Peiliang has given a deeply guide from the perspective of system science. As some early courses, by Professor Peter H. Calkins, Gale Johnson, Janrry De, Lovell Jarvis had certain helps to this study in “Mathematics Application in the Agricultural Economic Management”. CIRAD at Montpellier on the Mediterranean coast of France, Dr. Michael Fox is a helpful man, when I visited France or he came to Agricultural University of Hebei (AUH) for academic exchanges, he always brought us some new inspirations. At AUH, many colleagues, friends and students who helped and provided support to read, write and offer comments, which allowed us to quote their remarks and assisted in the editing, proofreading and designing of this book. The first student to help about this English version translation was Ms Yan Wen, who got a chance to study in Canada when she studied her Ph.D here. She helped us complete the first manuscript. As well as some Master students helped us update and treat the documents, such as Miss Xie Cong, Mr Diao Guangfu etc.

And we are also very thankful for the financial support to the project supported by Humanities and Social Science Project of China’s Ministry of Education: “Research on farmer’s production and business operation risk management based on modern information technology application” (No.12YJAZH138). We would also like to thank the editor Wency Davis from the Book Publishing Department of Science Publishing Group for enabling me to publish this book.

Besides, we are also very thankful for Bill Y. Chen and Prof. Assunta Di Vaio for their impartial and unbiased comments for the improvement of the book. We visited Zhengzhou Commodity Exchange, which has been the earliest market that can carry on agricultural product futures trade in China. We express our thanks to all of them, including PICC of Baoding branch, who gave us enthusiastic help, as well as the first-hand information to the Agricultural Park Research.

Above all finally, Doctor Abdur Rehmen, a qualified co-author, actively encourages, participates and updates in the publication of this book. As the author with main responsibility of the book, I also want to thank my wife Ms Zheng Xuejun, and the rest of my family members, who supported and encouraged me in spite all of the time it took me away from them. It was a long and difficult journey for them. Last but not the least, we have to beg their forgiveness of all those who have been with me over the course of the years and whose names I have failed to mention.

## Author's Biography

**Prof. Dr. Wang Jian**, the first author of this book, was born in Beijing on 13<sup>th</sup> October, 1958. He currently works in Agricultural University of Hebei, Baoding, P.R.China as a Professor. He has 110 graduated master students, 11 Ph.D students, published 18 books and more than 190 academic research papers. And he has got so many awards, honors and has the exposure to present the research papers in national and international conference. The main Scientific Research areas are Agricultural Development Programming, Environmental Protection, Agricultural Sustainable Development, Rural Information System and Network Construction, Agricultural Industrialization, Agricultural Risk Management and Insurance with China Access to WTO and the development of poultry industry in Hebei province. Besides, he has remained the Vice President of Baoding Price Society, member of American Rural Sociological Society, Director of the Association for Soft Science of China.

**Dr. Abdur Rehman**, the second author of this book, was born in District Chitral, on 11<sup>th</sup> April, 1982. He currently works as an Assistant Professor, in the Department of Agricultural Economics, Faculty of Agriculture, Gomal University, Dera Ismail Khan, Khyber-Pakhtunkhwa Province-Pakistan. He completed his B.Sc (Hons) and M.Sc (Hons) degrees in Agricultural Economics from the University of Agriculture Peshawar-Pakistan in 2004 and 2006 respectively. From February 2006 to September 2011, he worked as a Business development officer in Khushhali bank limited Pakistan, from September 2011 to October 2012, he taught as a lecturer of Economics in Institute of Business and Management Sciences, the University of Agriculture Peshawar-Pakistan. Besides, he completed his Ph.D in Agricultural Economics and Management from the Agricultural University of Hebei, Baoding P.R.China in 2015. He has published 9 research papers in the national and international journals.

Preface .....	III
Acknowledgments .....	IX
Author's Biography .....	XI
<b>Chapter 1 Introduction .....</b>	<b>1</b>
1.1 Raising the Question.....	3
1.2 Risk, Uncertainty and Information .....	5
1.2.1 The Concept of Risk .....	5
1.2.2 The Concept of Uncertainty .....	8
1.2.3 The Relations Between Risk and Uncertainty .....	9
1.2.4 The Relationship Among Information, Risk and Uncertainty.....	11
1.2.5 Significance of Agricultural Informatization .....	17
1.3 The Characteristics and Present Situation of the Agricultural Risk Management.....	19
1.3.1 The Complexity of Agricultural Risk Management Research .....	20
1.3.2 Current Research on Agricultural Risk Management and Decision-Making.....	22
1.4 Research Technical Route, Content and Frame .....	31
1.4.1 Research Technical Route .....	31
1.4.2 Research Content and Frame .....	32
1.5 Book's Rationales and General Information .....	34
1.5.1 The Certain Rationales of the Book Study.....	34
1.5.2 General Issues About the Study .....	36
<b>Chapter 2 Economic Theoretical Foundation of the Study.....</b>	<b>41</b>
2.1 Systematic Study of Agricultural Production Economic Problem .....	43
2.1.1 The Analysis Based on Agricultural Production Function .....	43
2.1.2 The Analysis on Consumption Market of Agricultural Products .....	46

2.1.3	Analysis of Input Factors for Agricultural Production.....	48
2.2	The Duality Analysis of the Agricultural Production in Market System .....	49
2.2.1	Definition of Multi-Input Agricultural Production Function .....	50
2.2.2	The Profit Maximization Model .....	51
2.2.3	Supply and Demand Functions .....	55
2.2.4	The Cost Minimization Model.....	57
2.3	The Risk Utility Theory.....	61
2.3.1	The Risk Measure Axiom .....	62
2.3.2	The Utility of the Risk Aversion .....	64
2.3.3	The Risk and the Revenue .....	69
2.3.4	The Utility Principle of the Risk Income .....	71
2.3.5	The Expectation Utility and the Mean-Square Deviation .....	74
<b>Chapter 3</b>	<b>Agricultural Production and Business Risks Identification.....</b>	<b>83</b>
3.1	Introductions to China Agricultural Risks and Uncertainty .....	85
3.1.1	Agricultural Natural Disasters .....	86
3.1.2	Agricultural Market Risk .....	95
3.2	Analysis of Environmental Impacts on Agricultural Production and Business Risk .....	96
3.2.1	Market Relations between Agriculture and Other Industries .....	97
3.2.2	Agricultural Ecological Economic System .....	100
3.2.3	Agriculture Participates in the Circulation of International Economy .....	103
3.3	Main Existence Forms of Agricultural Production Operational Risks .....	106
3.3.1	Agricultural Market Risk as One of the Main Risk .....	106
3.3.2	The Market Risk and the System Risk Intertwine Mutually in Agriculture.....	108
3.3.3	The Further Expansion of Agricultural Technology Risk .....	109
3.3.4	Farm Credit Risk Has Become the Agricultural New Risk Variety .....	111

3.4	Risk Identification Methods in Agricultural Production Management.....	112
3.4.1	The Principles of Recognizing Agricultural Production Operational Risk.....	113
3.4.2	The Procedures and Methods of Identifying Agricultural Risks .....	115
<b>Chapter 4 Measuring Agricultural Production Management Risk .....</b>		<b>123</b>
4.1	Risk Probability Distributions and Digital Characteristics.....	125
4.1.1	Continuous Distribution of Risks Events.....	126
4.1.2	Digital Characteristics of Probability Distribution .....	132
4.2	To Measure the Risk and Profit .....	134
4.2.1	Conventional Risk Determination Method .....	134
4.2.2	Method of Game Theory.....	138
4.3	Information Risk.....	141
4.3.1	Absolute Risk of Information .....	142
4.3.2	Relative Risk of Information.....	146
4.3.3	Information Skill Risk.....	149
<b>Chapter 5 Agricultural Production Risk Management Strategy .....</b>		<b>159</b>
5.1	The Selection of Stable Agricultural Production's Item .....	161
5.1.1	The Stability Conception of Agricultural Production and Measurement .....	162
5.1.2	The Analysis Method of Deviation Coefficient .....	163
5.2	Diversification Management Strategies.....	164
5.2.1	Correlation Coefficient and Production Composing.....	164
5.2.2	The Case Analysis of Crops Production in Hebei Province.....	165
5.3	The Strategy of Enhancing Management Flexibility .....	167
5.3.1	The Flexibility of Cost .....	167
5.3.2	The Flexibility of Equipments .....	168
5.3.3	The Flexibility of Production Time and Products .....	169
5.4	Optimal Production Portfolio Strategy Model.....	170

5.4.1	Quadratic Programming of the Least Revenue Variance .....	170
5.4.2	The Solution of the Model .....	171
5.5	Stochastic Dominance Analysis on Agricultural Production Risk.....	173
5.5.1	The First Degree Stochastic Dominance.....	174
5.5.2	The Second Degree Stochastic Dominance .....	175
5.5.3	The Application of the First Degree Stochastic Dominance .....	176
5.6	Measures of Agriculture Insurance.....	178
5.6.1	Insurance Premiums and the Amount Calculation .....	180
5.6.2	Disaster Claims .....	182
5.6.3	Necessity of Joining Insurance and the Effect Analysis .....	183
5.6.4	Establishment of Perfect Modern Agricultural Insurance System .....	186
<b>Chapter 6 Agricultural Market Risk Management Strategy.....</b>		<b>191</b>
6.1	The Futures Exchange of Agricultural Products.....	194
6.1.1	The Basic Operation Procedure of Futures Markets .....	196
6.1.2	Analysis of Agricultural Products Futures Transaction .....	200
6.2	The Price Discovery Function of the Futures Market .....	210
6.2.1	Analysis of Correlation .....	210
6.2.2	Analysis of Causation .....	212
6.2.3	The Basic Analysis.....	214
6.3	The Strategy of Hedge and Its Application.....	215
6.3.1	Optimum Hedging Rate .....	215
6.3.2	The Strategy of Hedge when Basis Changes .....	217
6.3.3	The Open Type Hedging Strategy .....	218
<b>Chapter 7 Complexity of the Agriculture Production Risk Management .....</b>		<b>223</b>
7.1	Introduction of the Risk System Concept.....	225
7.1.1	The Necessity of Risk System Concept Definition.....	226
7.1.2	The Regularity of the Risk Systems Representation.....	230
7.2	The Risk System Hierarchical Distribution Model .....	233

7.2.1	System Structure Tree .....	234
7.2.2	The Management Entropy in the Structural Analysis of the Risk System .....	236
7.2.3	The Fractal Structure of the Risk Distribution .....	240
7.3	The Risk Gather Model .....	242
7.4	The Risk Transmission Model .....	246
7.4.1	Series Risks Transmission Model .....	247
7.4.2	Parallel Risks Transmission Model .....	248
7.5	The Model of Risk Spread .....	250
7.5.1	Definition of Risk System Spread .....	251
7.5.2	Build up of Risk Spread Model .....	252
7.5.3	Multi Dimensional Stochastic Spread Model .....	253
7.5.4	Lead to Chaos of Risk Spread .....	256
<b>Chapter 8 Decision Support System of Agricultural Risk Management .....</b>		<b>261</b>
8.1	System Management and Decision of Agricultural Production and Business Risk .....	263
8.1.1	The Basic Idea of Risk Management .....	263
8.1.2	The Agricultural Production and Business Risk Management System .....	265
8.1.3	Management Strategy of Agricultural Production and Business Risk System .....	266
8.2	The Optimal Design of Agriculture Risk Management System .....	268
8.2.1	The Risk Transmission Model of Poultry Epidemic Disease .....	270
8.2.2	Risk Management System Optimization Model .....	275
8.3	Environmental Analysis of Macroeconomic Policy .....	277
8.3.1	Elastic Fractal Dimension Model .....	278
8.3.2	Macroeconomic Scenario Analysis .....	282
8.4	Using Info-tech and Network for Agricultural Risk Aversion .....	285
8.4.1	The Construction of China National Agriculture Information Network System .....	285
8.4.2	The Application of Agriculture Information Network .....	293

8.5	AHP Analysis .....	298
<b>Chapter 9</b>	<b>Review and Outlook .....</b>	<b>307</b>
9.1	History of Agricultural Risk Study Review .....	310
9.1.1	Modern Economic Development Is Based on the Evolution of Market Concept.....	310
9.1.2	Research Progress of Agricultural Risk Management Methodology .....	313
9.2	Guidelines to the Future Research.....	316
